Topic: Nail Art Services

THEME OF THE PROJECT

Pro-nails studio is a responsive nail art services web application, developed to provide services to the peoples who needs. Customer can login to the system by registering with their details. They can acces the and book services available in the web application.

OBJECTIVE OF THE PROJECT

There are 2 users, admin and customers who wants the nail art services. Customer will register to get the services of "pro nail studio". After login customers can see the services that offer by pro nail studio. They can book for services. Admin can see the bookings by customer.

USERS OF THE PROJECTS

Mainly 2 users are there;

- 1. Admin: Have permission to handle all the modules. Admin is the only one who can add and edit services also confirming the bookings of customers.
- 2. Customers: Customer can access the page by login to it after registering with their details. After logging user can book the services that they provided.

MODULES OF THE PROJECT

1. Admin

1.1 Service management module: Admin can add, delete and update the services they providing. That includes service names, descriptions, rate and the duration of the services.

1.2 User handling module: Admin can confirm or delete the bookings of the customers. Also he/she can provide the bill after the services.

2. User

- 2.1 Register module: Customer need to register before login. For that customer need to register with their details. And login to the system by using user name and password.
- 2.2 Booking module: To get the services customer need to book. Just need to check the box corresponding to the services after that choose a date then wait for the confirmation from admin's side.
